TL880LTVZ PowerSeries Neo Alarm.com Dual-Path LTE/Internet Communicators

Introduction

We are pleased to introduce the new TL880LTVZ PowerSeries Neo Alarm.com Dual-Path LTE/Internet Communicator provisioned with a Verizon SIM card and built-in Z-Wave Plus technology, offering integrated home automation features through Alarm.com services. When paired with PowerSeries Neo v1.1+, and delivered in conjunction with the Alarm.com interactive solution, this product provides a complete and comprehensive solution. This communicator will replace the CD8080/CD8080I communicators which are being phased out.

As the CDMA model is phased out and the LTE model is phased in, we are excited to offer the CD8080VZ and CD8080IVZ at steeply discounted rates. Contact your local distributor to take advantage of this amazing offer!

Communicator Comparison

Market Segments

- Residential, Small Business, and Smart Home
- Available to the United States

Use Cases

- The Alarm.com app enables users to remotely activate certain tasks at their property, for example, set their thermostat to a desired temperature, lock or unlock the front door, and open and close the garage door.
- With built-in Z-Wave Plus technology, end users can schedule lights in the home to switch on and off randomly when they are on vacation.
- Supports the transmission of visual verification images to the central monitoring station.

Main Features

Main Features	Customer Benefit	Value
Verizon LTE Support	TL880LTVZ uses the latest cellular technology to ensure the highest speed and reliability	Using the latest technology means the longest possible life-span in the field
Alarm.com Interactive Services	Remote monitoring and control of the security system	Access to the alarm system and smart home devices from anywhere
Dual-Path LTE and Internet alarm transmission	Cellular can be used on its own, or combined with Internet	The flexibility of being installed cellular-only, or dual-path for added redundancy
Z-Wave Plus and Image Sensor support	Smart home combined with security features	Combines security, convenience and energy management in one solution
Visual verification can be sent over cellular and Internet	Visual Verification can be sent using the PG9934P and PG9944 PowerG devices	Enables central monitoring stations to quickly identify false alarms or verify burglaries in progress

Compatibility

- Compatible with PowerSeries Neo V1.1+

Availability

- Verizon SIM provided
- UL and FCC Certifications
- English, Spanish, Portuguese
